

JobBoard

Omar Atakishiyev T4J6KU

Project Overview:

JobBoard is a job listing platform that allows employers to post job opportunities and job seekers to browse and apply for positions. The platform provides a clean interface for searching and filtering job postings by category, location, and job type, as well as managing applications.

Domain-Specific Vocabulary

- **Job Posting** — a listing created by an employer describing an open position, including requirements, salary, and application details.
- **Application** — a submission made by a job seeker expressing interest in a job posting.
- **Category** — a classification label for job postings (e.g. "IT", "Marketing", "Finance").
- **Job Type** — the employment type of a position (e.g. full-time, part-time, remote, internship).

Functional Requirements

Roles

1. **Guest** (Unauthenticated User)
2. **User** (Authenticated — Employer or Job Seeker)
3. **Admin** (Superuser)

1. Guest

Features by pages:

- Home (/) — Browse all job postings, Search and filter postings
- Job Detail (/jobs/{id}) — View full job posting details
- Categories (/categories) — Browse postings by category
- Sign Up (/register) — Register for an account
- Login (/login) — Log in to an existing account

Restrictions:

- Cannot create or manage job postings
- Cannot apply to jobs

2. User

Features:

- All Guest features
- Post new job listings (Employer)
- Edit and delete own job postings
- Apply to job postings (Job Seeker)
- View own applications
- View applicants on own postings
- Manage own profile

Restrictions:

- Cannot manage other users' content
- Cannot access admin panel

Pages:

- All Guest pages
- Dashboard (/dashboard)
- My Postings (/jobs/my)
- Create Posting (/jobs/create)
- Edit Posting (/jobs/{id}/edit)
- My Applications (/applications/my)

3. Admin

Features:

- All User features
- Manage all job postings (view, edit, delete)
- Manage all applications
- Manage users (view, edit, ban)
- Manage categories (CRUD)

Pages:

- All User pages
- Admin Dashboard (/admin)
- User Management (/admin/users)
- Job Management (/admin/jobs)
- Category Management (/admin/categories)

Technology Stack

- Database: SQLite
- Backend:
 - Framework: Laravel (PHP)
 - Authentication: Laravel Breeze
- Frontend:
 - Blade templates
 - Tailwind CSS for styling
 - DaisyUI for UI components

Database Schema

Entities

- users
- job_postings
- categories
- applications
- tags

Relationships

- users → job_postings (One-to-Many): A user can create multiple job postings, but a posting belongs to one user
- categories → job_postings (One-to-Many): A category can have multiple job postings, but a posting belongs to one category
- users ↔ job_postings (Many-to-Many via applications): A user can apply to multiple jobs, a job can have multiple applicants

Raw DBML Description

```
Table users {  
  id integer [primary key]  
  name varchar  
  email varchar  
  password varchar  
  is_admin boolean  
  created_at timestamp  
  updated_at timestamp  
}
```

```
Table categories {  
  id integer [primary key]  
  name varchar  
  created_at timestamp  
  updated_at timestamp  
}
```

```
Table job_postings {
```

```
id integer [primary key]
user_id integer [not null]
category_id integer [not null]
title varchar
description text
location varchar
salary integer
job_type enum('full-time', 'part-time', 'remote', 'internship')
experience_level enum('junior', 'mid', 'senior')
is_active boolean
deadline date
created_at timestamp
updated_at timestamp
}
```

```
Table applications {
  id integer [primary key]
  user_id integer [not null]
  job_id integer [not null]
  cover_letter text
  cv_path varchar
  status enum('pending', 'reviewed', 'rejected', 'accepted')
  created_at timestamp
  updated_at timestamp
}
```

```
Table tags {  
  id integer [primary key]  
  name varchar  
  created_at timestamp  
  updated_at timestamp  
}
```

```
Table job_tags {  
  job_id integer [not null]  
  tag_id integer [not null]  
  indexes {  
    (job_id, tag_id) [pk]  
  }  
}
```

Ref: job_postings.user_id > users.id

Ref: job_postings.category_id > categories.id

Ref: applications.user_id > users.id

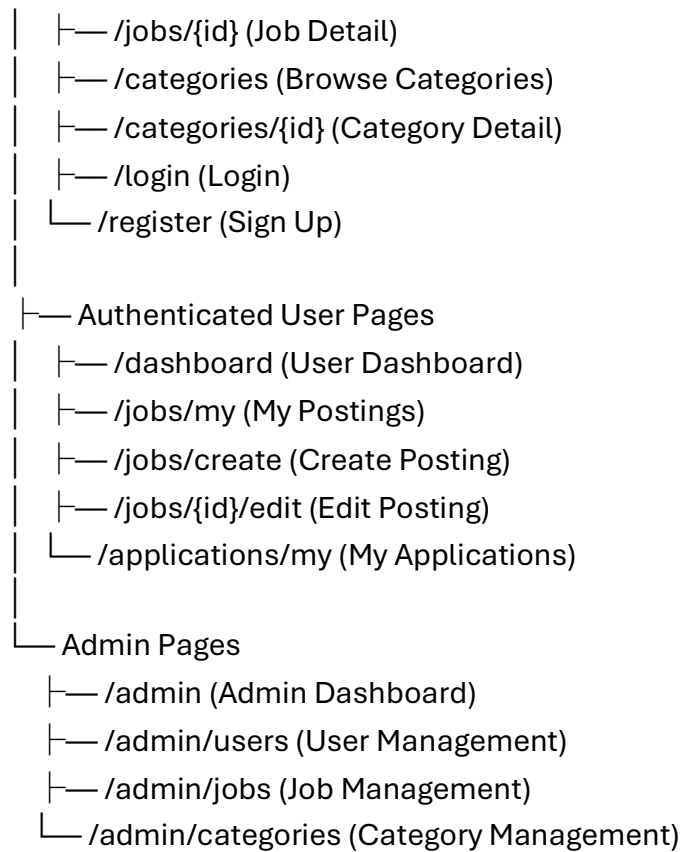

Ref: applications.job_id > job_postings.id

Ref: job_tags.job_id > job_postings.id

Ref: job_tags.tag_id > tags.id

Planned Sitemap (Endpoints for Features)

```
JobBoard  
|  
| — Public Pages (Guest)  
| | — / (Home)
```

Deadline: 30 Apr 2026

Job Description

We are looking for an experienced Software Engineer to join our growing engineering team. You will design, develop and maintain scalable backend services and APIs.

Responsibilities:

- Design and implement new features
- Write clean, maintainable code
- Collaborate with cross-functional teams
- Participate in code reviews

Requirements:

- 3+ years of backend development experience
- Strong knowledge of PHP / Laravel
- Experience with relational databases

AI Appendix

UI Mockup Generation

With ChatGPT I generated the prompt for the UI mockups as follows:

"I want to build a job listing web application. Create a prompt I can give to an AI to generate the user interface mockups. I want to use DaisyUI and Tailwind CSS. It will serve as a mockup so only HTML and CSS from CDN should be used."

I used the generated prompt in v0 as a starting point and asked the AI to make further improvements:

"The search bar needs a button since this is a server-side app with no JavaScript. Add category filter chips next to the search. Remove the hero section, keep only the job listings grid."

"On the create posting page, add radio buttons for experience level, checkboxes for tags, and a select dropdown for job type. Also add server-side error messages like Laravel would generate."

"Add a My Applications page with a status column showing pending, reviewed, accepted, and rejected states."

After this I downloaded and edited the generated HTML to fit my needs. The generated mockups were a good starting point but I had to make several adjustments to better align with the functional requirements.
